Geography Chapter 1

Locating places on the earth

8 to difficult words

1. Map

2. ⁿ coordinates

3. Atlas

4. Grid

5. Equator

6. Latitudes

7. ⁿ Longitude

8. ~~axis~~ ⁿ axis

9. ⁿ many ⁿ revision

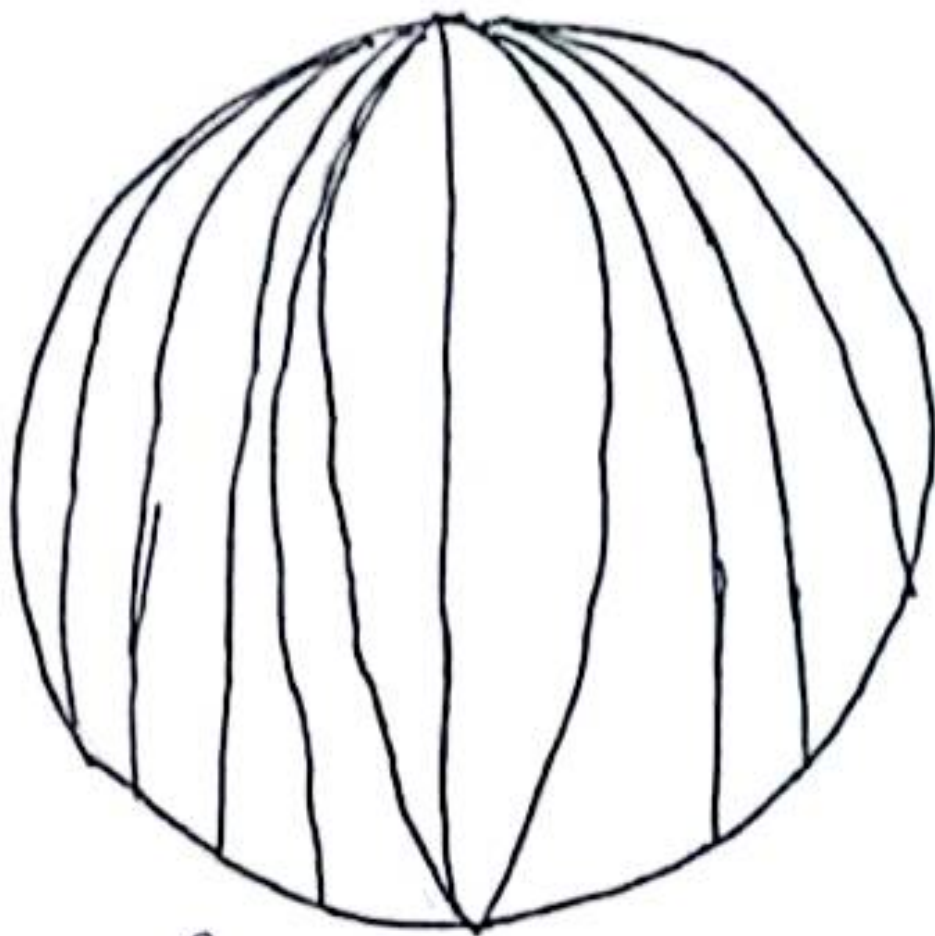

10. ⁿ parallel ⁿ Equator

Learn!

- ~~8/1/26~~
 8/1/26

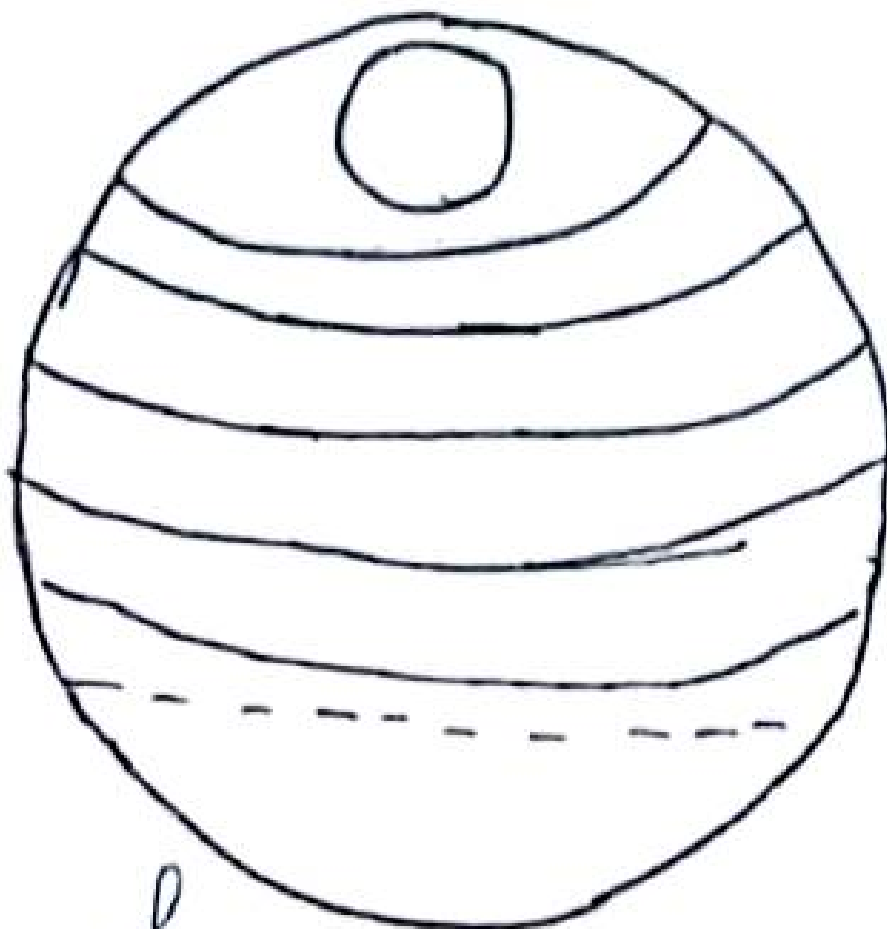

Important Terms

1. Latitude $\Rightarrow$ Latitudes are imaginary line which runs from east to west, parallel to equator. such lines are called parallels of latitude.

Latitudes

- ② Longitude - The imaginary line of circles which runs from one pole to another are called meridians of longitude.

Longitude

3 Map: A map is a representation of a drawing of an area on a flat surface

④ Atlas $\Rightarrow$ An atlas is a book or collection of maps

⑤ Grid $\Rightarrow$ Grid is a network of parallels of latitudes and meridians of longitudes

⑥ ~~coordinates~~ $\Rightarrow$ The intersecting of latitude and longitude lines, which helps in identifying the exact location of a place

III Question and answer

Q1. What is a map and how do we use it? What are its main components?

Ans: A map is like a picture that shows what is in a certain area like a treasure map. We use maps to find places and see how to get from one place to another.

The main parts of a map are:-

- > Distance $\Rightarrow$ shows how far things are from each other
- > Direction $\Rightarrow$ shows which way is north, south, east and west
- > symbol = little pictures or icons

Q.1. Describe the various type of maps?

Ans. There are different kinds of maps:-

- ① Physical maps :- The maps which mainly show some natural features such as mountains, oceans and rivers.
- ② Political map :- The maps which show the boundaries of countries, states and cities etc. By a map of India, you can know the state and union territories and their capital.
- ③ Thematic maps :- The map of which shows a single kind of information such as population, forest, soil, distribution maps etc.

Q5 What are coordinates? How can longitudes be used to mark any location on the earth

Ans coordinates $\Rightarrow$ It is like addresses that help us to find exact place on a map.

They are made up of two numbers:-

1. Latitudes $\Rightarrow$ These lines run east to west and tell us how far north or south a place is from the equator.

2. Longitudes $\Rightarrow$ These lines run from the North Pole to South Pole and tell us how far east or west a place is from the Prime meridian.

Date

Page

Q4 How are local time and standard time Related to longitude?

Ans: Local time is the time at a specific place based on the position of the sun.

* Standard time is a fixed time for a whole region or country.

* Longitude helps us to figure out time zones because as you move east or west the time changes.

Q5 What is 5:30 PM in India when it is 12 PM or noon in London?

Ans: As we know that the longitude towards the East of Greenwich meridian are ahead of Greenwich time. As India is ahead of London it will be 5:30 PM because it is towards the East of Greenwich meridian.

Q6 Delhi and Bengaluru's latitudes are 29°N and 12°N the longitudes are almost the same, 77°E . How much will be the difference in local time between the two cities

Ans * Delhi and Bengaluru have almost the same latitude more (77°E) which means there will be very difference in local time between the two cities due to their longitudinal position

* Latitude affects the ^{climate} and day length but not the local time directly

* since the earth rotates ^{earth} 15 degrees of longitude every hour and both Delhi and Bengaluru are situated at nearly the same longitudes the difference in local time between is

* Therefore, the local time in ^{Delhi} Delhi and Bengaluru is fortuitary ~~same~~ ^{same}

Q7 what do we need symbols and colour on maps?

and Symbols and colour are essential in maps because they :-

★ Simplify complex information and make it ^{easy} easy to understand.

★ Represent different features (e.g. building, river, road) without overcrowding the map.

★ Ensure consistency and clarity for map users to read and interpret the map quickly.

★ Help to convey information visually which is more interactive and accessible to users.

17/11/22

Activity

Draw a well-labeled diagram of earth showing all the important latitudes and longitudes.
